10/814,968 Art Unit: 2185

DETAILED ACTION

1. As per the instant Application having Application number 10/814,968, the Examiner acknowledges the applicant's submission of the amendment dated November 2, 2007. At this point, claims 1 and 12 have been amended and claims 4, 13-14, 16-20 and 22 stand canceled. There are 13 claims pending in the application; there are 3 independent claims and 10 dependent claims, all of which are ready for examination by the examiner. Claims 1-3, 5-12, 15 and 21 are pending.

REJECTIONS NOT BASED ON PRIOR ART

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. <u>Claims 1-3, and 5-11</u> are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. Claim 1 recites the limitation "the data memory address" in line 10. There is insufficient antecedent basis for this limitation in the claim. The applicants might consider amending this claim to read –a data memory address-.
- 5. Any claims not specifically addressed above are rejected for encompassing deficiencies found in base claims upon which they depend.

10/814,968 Art Unit: 2185

REJECTIONS BASED ON PRIOR ART

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 1. <u>Claims 1 and 12</u> are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 14 and 19 respectively of copending Applications No. 10/811,613, now patented as US 7,193,903.
- 2. Initially, it should be noted that the present application and Application No. 10/811,613, now patented as US 7,193,903 have the same inventive entity. The assignee for both applications is Samsung Electronics Co., Ltd.
- 3. Claimed subject matter in the instant application is fully disclosed in the referenced US patent and would be covered by any patent granted on that copending application since the referenced US patent and the instant application are claiming common subject matter, as noted below. See In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993).

10/814,968 Art Unit: 2185

- 4. Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of US patents 7,193,903 in the instant application. See MPEP § 804.
- 5. Claim 1 is compared to claim 14 of application 10/811,613 in the following table:

| Instant Application | Application 10/811,613 |
|--|---|
| 1. (Currently Amended) An integrated circuit | 1. (Currently Amended) A method of |
| to which inputs and outputs (I/Os) are | controlling an integrated circuit (IC) to which |
| separately provided and to which a write | inputs and outputs (I/Os) are separately |
| address and a read address are simultaneously | provided and to which a write address and a |
| input during one period of a clock signal, the | read address are simultaneously input during |
| integrated circuit comprising: | one period of a clock signal |
| | |
| a plurality of memory blocks, each of the | and which comprises a plurality of memory |
| memory blocks Comprising a plurality of sub- | blocks, each of the memory blocks comprising |
| memory blocks; | a plurality of sub-memory blocks, |
| | |
| a plurality of data memory blocks | data memory blocks corresponding to the |
| corresponding to the memory blocks, wherein | memory blocks, |
| each of the data memory blocks has the same | |
| size as a sub-memory block; | |
| | |
| | L |

10/814,968 Art Unit: 2185

and a tag memory controlling unit,

which writes data to the memory blocks or reads data from the memory blocks in response to the write address or the read address, wherein when the write address and the read address are the same as the data memory address, the read operation, is performed in the data memory block and the write operation is performed in the sub-memory block, and wherein when the write address and the read address are both not the same as the data memory address, the operation corresponding to the address that is the same as the data memory address is performed in the data memory block and the operation corresponding to the address that is not the same as tile data memory address is performed in the submemory block.

and a tag memory controlling unit, the method comprising:

(a) receiving a write address, a read address, and write data; (b) determining, a memory block and a data memory block in which a data read operation and a data write operation are to be performed in response to the write address and the read address; (c) performing the data read operation or the data write operation in the data memory block according to the determination of step (b); and (d) performing the data read operation or the data write operation in the memory block according to the determination of step (b).

14. (Currently Amended) The method of claim
1, wherein the tag memory controlling unit
writes data to the memory blocks or reads data
from the memory blocks in response to the
write address or the read address.

6. Claim 12 is compared to claim 19 of application 10/811,613 in the following table:

| Instant Application | Application 10/811,613 | |
|--|---|--|
| 12. A method for simultaneously performing a | 15. (Currently Amended) A method for | |
| write operation and a read operation in an | performing a write operation and a read | |
| integrated circuit having a separate input and | operation in an integrated circuit (IC) | |
| output and a plurality of data memory blocks | comprising a separate input and output (I/O), a | |
| and a plurality of sub-memory blocks, the | plurality of memory blocks, each of the | |
| method comprising: | memory blocks comprising a plurality of sub- | |
| | memory blocks, data memory blocks | |
| | corresponding to the memory blocks, and a | |
| · | memory controlling unit, the method | |
| | comprising: receiving a write address, a read | |
| | address and a write data command during a | |
| | period of a clock signal; | |
| | | |
| determining if a write address and a read | determining, a first memory location and a | |
| address have been input during a period of a | second memory location, where a write | |
| clock signal; | operation and a read operation are to be | |
| | performed in response to the write address and | |
| | the read address; and performing the write | |
| | operation in one of the first memory location | |
| | and the second memory location and the read | |

10/814,968 Art Unit: 2185

operation in one of the first memory location and the second memory location.

18. (Original) The method of claim 15, wherein the determination step further comprises: determining if the write address and the read address are input;

determining if an upper address of the write address is the same as an upper address of the read address, when the write address and the read address have been input during the period of the clock signal; determining if an upper address of the write address is coincident with an upper address of the read address; determining if the write address and the read address are coincident with a data memory address; and determining if data stored in one of the first memory location and the second memory location is valid data.

and performing a write operation and a read operation such that upon determining that the write address and the read address are the same as a data memory address, the read operation is performed in the data memory block and the

19. (Original) The method of claim 18, wherein the performing step further comprises: performing the write operation or the read operation in one of the first memory location and the second memory location, when the

10/814,968 Art Unit: 2185

write operation is performed in the submemory block and upon, determining that the
write address and the read address are both not
the same as the data memory address the
operation corresponding to the address that is
the same as the data memory address is
performed in the data memory block and the
operation corresponding to the address that is
not the same as the data memory address is
performed in the sub-memory block.

operation to be performed corresponds to the address coincident with the data memory address; performing the read operation in one of the first memory location and second memory location, when the write address and the read address are coincident with the data memory address; storing new data in one of the first memory location and the second memory location, when data stored in one of the first memory location and the second memory location is valid data; and writing the new data to one of the first memory location and the second memory location, when data stored in one of the first memory location and the second memory location is not valid data.

This double patenting rejection applies to dependent claims 2-3, 5-11 and 15.

ACKNOWLEDGMENT OF ISSUES RAISED BY THE APPLICANT

Response to Amendment

6. Applicant's arguments filed on November 2, 2007 have been considered and are partially persuasive.

10/814,968 Art Unit: 2185

7. As required by M.P.E.P. § 707.07(f), a response to these arguments appears below.

ARGUMENTS CONCERNING PRIOR ART REJECTIONS

8. Claims must be given the broadest reasonable interpretation during examination and limitations appearing in the specification but not recited in the claim are not read into the claim (See M.P.E.P. 2111 [R-1]).

FIRST POINT OF ARGUMENT

Applicant's remarks with respect to 35 U.S.C. 101 and 112 rejections are persuasive as the prior 35 U.S.C. 101 and 112 rejections have been overcome by claim amendments presented on amendments and arguments filed on November 2, 2007; therefore, previously presented 35 U.S.C. 101 and 112 rejections have been withdrawn.

SECOND POINT OF ARGUMENT

- 10. In response to Applicant's remarks with respect to obviousness-type double patenting rejection under US Application 10/811,613, now patented as US 7,193,903 wherein Applicant remarks that the instant application and US Application 10/811,613, now patented as US 7,193,903 "cannot cover the same subject matter, since a method claim does not infringe an apparatus claim;" the Examiner disagrees.
- 11. There Examiner would like to respectfully submit that type double patenting rejection of the instant application under US Application 10/811,613, now patented as US 7,193,903 is deemed proper since M.P.E.P. 821.04 [R-3] reads "Where applicant voluntarily presents claims to the product and process, for example, in separate applications (i.e., no restriction requirement was made by the Office), and one of the applications issues as a patent, the remaining application

10/814,968 Art Unit: 2185

may be rejected under the doctrine of obviousness-type double patenting, where appropriate (see MPEP 804 -804.03), and applicant may overcome the rejection by the filing of a terminal disclaimer under 37 CFR 1.312 (c) where appropriate" [See M.P.E.P. 804.01 [R-3] and M.P.E.P. 821.04 [R-3]].

THIRD POINT OF ARGUMENT

12. Applicant's remarks with respect to the double patenting rejection under US 6,826,088 are persuasive as the prior double patenting rejection under US 6,826,088 has been overcome by claim amendments and arguments filed on November 2, 2007; therefore, previously presented double patenting rejection under US 6,826,088 has been withdrawn.

FOURTH POINT OF ARGUMENT

- 13. Applicant's remarks with respect to Liu in view of Favor in light of claim amendments presented on November 2, 2007 is found to be persuasive; therefore, the rejection of claims 1-3, 8-13 and 15 under 35 U.S.C. 103 has been withdrawn.
- 14. All arguments by the applicant are believed to be covered in the body of the office action; thus, this action constitutes a complete response to the issues raised in the remarks dated November 2, 2007.

CLOSING COMMENTS

- 15. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 16. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

10/814,968 Art Unit: 2185

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

a. STATUS OF CLAIMS IN THE APPLICATION

17. The following is a summary of the treatment and status of all claims in the application as recommended by M.P.E.P. 707.07(i):

a(1) SUBJECT MATTER CONSIDERED ALLOWABLE

- 18. The subject matter of claims 1-3, 5-12, 15 and 21 is considered as allowable subject matter; however, claims 1-3, 5-12, and 15 stand rejected as obviousness-type double patenting under application 10/811,613, now issued as patent US 7,193,903 (See above).
- 19. The primary reasons for allowance of claims 1 and 12 in the instant application is the combination with the inclusion in these claims of the limitation of method/system for simultaneously performing a write operation and a read operation wherein "when the write address and the read address are the same as the data memory address, the read operation, is performed in the data memory block and the write operation is performed in the submemory block., and wherein when the write address and the read address are both not the same as the data memory address, the operation corresponding to the address that is the same as the data memory address is performed in the data memory block and the

10/814,968 Art Unit: 2185

operation corresponding to the address that is not the same as the data memory address is performed in the sub-memory block." The prior art of record neither anticipates nor renders obvious the above recited combination.

20. The primary reasons for allowance of claim 21 in the instant application is the combination with the inclusion in these claims of the limitation of an integrated circuit for simultaneously performing a write operation and a read operation wherein "a tag memory controlling unit, which writes data to the memory blocks or reads data from the memory blocks in response to the write address or the read address, wherein access to the same submemory block is not simultaneously performed when the write address and the read address are the same, wherein the tag memory controlling unit has a same number of decoding addresses as a number of addresses for decoding the data memory blocks and a number of columns and rows different from a number of columns and rows of the data memory blocks." The prior art of record neither anticipates nor renders obvious the above recited combination.

a(2) CLAIMS REJECTED IN THE APPLICATION

21. Per the instant office action, claims 1-3, 6, 8-13, and 15 have received a second action on the merits and are subject of a final rejection.

a(3) CLAIMS NO LONGER UNDER CONSIDERATION

22. Claims 4, 13-14, 16-20 and 22 stand canceled as of amendment received on November 2, 2007.

b. <u>DIRECTION OF FUTURE CORRESPONDENCES</u>

10/814,968 Art Unit: 2185

23. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yaima Campos whose telephone number is (571) 272-1232. The examiner can normally be reached on Monday to Friday 8:30 AM to 5:00 PM.

IMPORTANT NOTE

24. If attempts to reach the above noted Examiner by telephone are unsuccessful, the Examiner's supervisor, Mr. Sanjiv Shah, can be reached at the following telephone number: Area Code (571) 272-4098.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
